Language models for the simulation of quantum many-body systems

Juan Carrasquilla Alvarez[1]

[1]ETH Zurich, Switzerland

September 17, 2024

This talk will discuss our work on using models inspired by natural language processing in the realm of quantum many-body physics. We demonstrate their utility in solving ground states of quantum Hamiltonians, particularly for ground states of arrays of Rydberg atoms on the Kagome lattice as well as for real-time dynamics of open quantum systems.
